

Application Common Operating Environment (AppCOE) is a framework of common architecture that promote code-reuse, software interoperability and Cross-OS platform capabilities among systems and devices. It is built on the powerful open source Eclipse framework and integrates all of MapuSoft tools.

Why use AppCOE?

- Provide freedom from code getting locked to a specific platform, protect investment and adds stability to embedded applications
- Supports multiple embedded development languages (C, C++, and Ada) and development API interfaces (OS Abtractor, VxWorks, Linux/POSIX, Windows, micro-ITRON, µC/OS, FreeRTOS, ThreadX, Nucleus, VRTX, QNX, RTLinux and pSOS)
- Powerful Cross-OS feature generates code to support the following target OS's:

Android	LynxOS-178	NetBSD	Solaris	VxWorks
eCOS	LynxOS-SE	Nucleus	ThreadX	Windows
Linux	µITRON	QNXNeutrino RTOS	µC/OS III	FreeRTOS
LynxOS	Freescale MQX	RT Linux	Unix	In-house
- Profile applications on target to identify performance bottleneck and perform code optimization

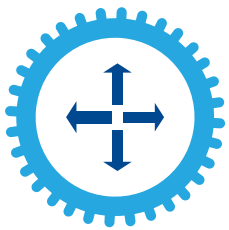

OS Changer Porting Kit

Rapid Software Reuse on any Operating System with Performance Optimization

- Re-use your C/C++ software developed for VxWorks, Linux/POSIX, Windows, micro-ITRON, µC/OS, FreeRTOS, ThreadX, Nucleus, VRTX, QNX, RTLinux and pSOS on another OS

<https://mapusoft.com/os-changer-porting-kit>

Cross-OS Development Platform

Develop Once to Deploy on Multiple Platforms with Ease

- Develop C/C++ software using one or multiple OS Interface options and run the same code base on multiple operating systems

<https://mapusoft.com/cross-os-development-platform>

OS Abtractor

MapuSoft's OS Abstraction Layer (OSAL)

- Is a commercial-grade OS Abstraction Layer (OSAL) designed without a layered implementation in order to provide better performance at lower cost

<https://www.mapusoft.com/os-abtractor>

RTOS Simulator for Developers

Develop, Run and Test Applications on a Virtualized Host Platform

- Develop, run and test embedded applications on Windows or Linux host environments without the need for the original OS or expensive target hardware

<https://www.mapusoft.com/rtos-simulator-developers>

RTOS Simulator for Academics

Develop, Run and Test Applications on Windows or Linux Host and Test on Hardware

- Cross-compile, Download and Test Applications on various supported Target Hardware

<https://www.mapusoft.com/rtos-simulator-academic>

Ada-Changer

Automatically convert Ada code to C/C++/Java/C#

- Compile Ada code using C/C++/Java/C# tools and support target platforms not supported by Ada
<https://mapusoft.com/ada-to-c-changer>

OS Version UpKit

Upgrade Your OS Version without Manual Porting Effort

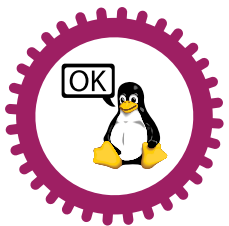

- Easily upgrade Linux and POSIX applications to a newer version of the OS
<http://www.mapusoft.com/os-version-upgrade-kit>

Application-OS Profiler

Gather Performance Data for Your Application and Platform

- Identify performance bottlenecks and compare performance metrics on various target environments
<https://www.mapusoft.com/appcoe>

Linux OK (Linux Optimization Kit)

Linux Optimization Kit: Increase Performance of Linux Applications

- Provides kernel and application specific optimization features all aimed at increasing CPU performance, speeding up boot-time and reducing memory footprint for Linux applications
<https://mapusoft.com/linux-optimization-kit>

Programming-Language Changer

Automated Software Language Conversion

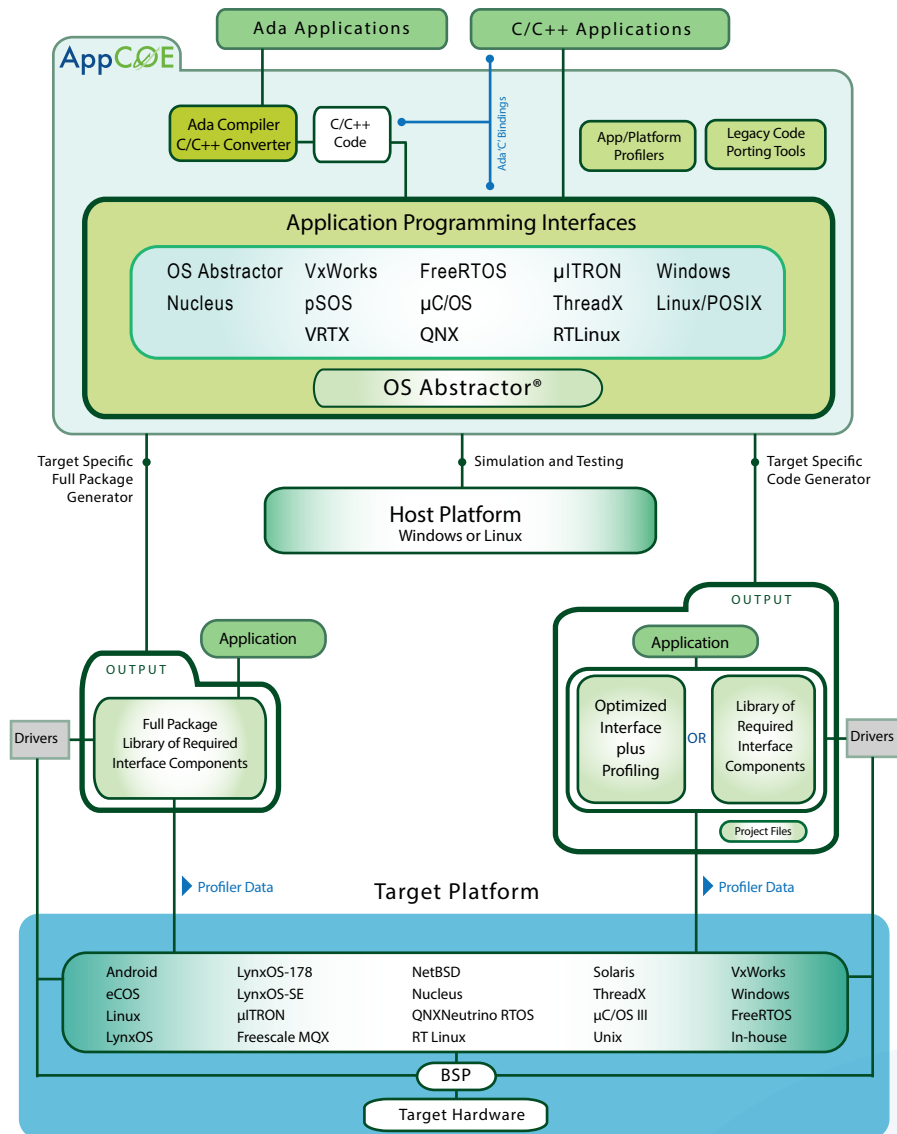

- Converts legacy application code from over 30 programming languages into modern languages.
<https://mapusoft.com/programming-language-changer>

DesignDoc Tools

Automated Software Language Conversion

- DesignDoc tools can be used to fully understand your existing software in terms of complexity, similarity, dead code, and external dependencies.
